DETAILED ACTION

In response to preliminary amendment filed 10/06/2000, claims 1-5 have been cancelled newly added claims 6-50 are pending.

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 6-15, 32, 33 and 35, drawn to a terminal for the receiving and decoding of information, classified in 348/461.

Group II, claim(s) 16-24, drawn to a system for providing information to a terminal through a computer network, classified in 709/217.

Group III, claim(s) 25-31, and 34, drawn to a database storage system, classified in 713/116.

Group IV, claim(s) 36-48, drawn to a system for processing user requests for educational material, classified in 434/156.

Group V, claim(s) 49 and 50, drawn to a wireless communication system, classified in 455/3.01.

2. The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Each of the groups are prima facie independent from one another. The inventions do not share a special technical feature. The invention of Group I comprises a communication interface, a first memory, a controller, a coder-decoder and a display driver. The invention of Group II comprises a data server for storing a plurality of data and a personal computer used for retrieving data. The invention of Group III is drawn to a system including a database server for storing a plurality of data, and a data charging vending machine connected with the database server over a network. The invention of Group IV is drawn to a network for storing data, the network capable of responding to a users request to receive learning data. The invention of group V is directed to a wireless data communication network using a radio frequency. The only common technical feature between the inventions is the ability to receive data over a network. This feature is old in the art and therefore does not constitute a special technical feature as defined by PCT Rule 13.2.
